## SQL Assignment

1. Top 10 customers and their emails

Generate the top 10 customers by total amount spent ordered from highest to lowest. What we need to do is sum the payment amount group by customer data (id, name and email), then order the list by total payment amount. The top 10 customers is the 10 customers that have the highest total amount. From the result, we got their emails and we can reward them.

The tables to join: payment > customer

➢ SQL Query:

```
select sum(payment.amount) as total_amount, payment.customer_id ,
customer.first_name, customer.last_name, customer.email
from payment
join customer
on payment.customer_id = customer.customer_id
group by payment.customer_id, customer.first_name, customer.last_name, customer.email
order by total_amount DESC
limit 10
```

3. The most profitable movie genres (ratings)

We have to ratings the most profitable movie genres by demands and sales. We can find out the demand by calculating how many customers have borrowed films grouped by film genre, and the total number of sales by the sum total. The highest total demand and total sales is the most profitable movie genres.

The tables to join: category > film\_category > inventory > rental > payment

```
SQL Query:
```

```
select category.name as genre, count(payment.customer_id) as total_demand,
sum(amount) as total_amount_sales
from category
join film_category on film_category.category_id = category.category_id
join inventory on inventory.film_id = film_category.film_id
join rental on rental.inventory_id = inventory.inventory_id
join payment on payment.rental_id = rental.rental_id
```

group by genre
order by total\_demand DESC, total\_amount\_sales DESC

### ➢ Query Result:

🔡 category 1 🗙								
۰T	oT select category.n   ∰ Enter a SQL expression to filter results (use Ctrl+Space)							
Grid		ABC genre 🛛 🕄	123 total_demand 🏾 🟹 🕻	12 total_amount_sales 1				
Ē	1	Sports	1,081	4,892.19				
	2	Animation	1,065	4,245.31

	15	Travel	765	3,227.36				
	16	Music	750	3,071.52				

# Visualization (Excel):

From the result, we know that sports is the most profitable genre because the sports's demands and total amount of sales are the highest. This information help the store to make sure the sports genre never run out of stock.

4. Total movies that were returned late, early, and on time

To see the total movies that were returned late, early, and on time we can count how many days the customers have been borrowed the movies, started from the rental date to the return date and compare it with rental duration.

The tables to join: film > inventory > rental

```
> SQL Query:
select case
    when rental_duration > date_part('day',return_date-rental_date) then 'Early'
    when rental_duration = date_part('day',return_date-rental_date) then 'On Time'
    else 'Late'
    end as status_of_return
    , count(rental.rental_id) as Total_Movies
from film
inner join inventory on film.film_id=inventory.film_id
inner join rental on inventory.inventory_id=rental.inventory_id
group by status_of_return
```
